

New Core Collection of luminaires puts emphasis on energy efficiency and cost effectiveness

Cooper Lighting has carried out an extensive programme of upgrades to many of its fast-moving commercial lighting and emergency lighting products and brought them together under the banner of the Core Collection.

Readily available through the company's nationwide network of stockists, products in the Core Collection embrace the key attributes required by specifiers and installers, including energy efficiency, aesthetic appeal, ease of installation and competitive pricing.

The initial product offering covers recessed fluorescent luminaires, surface fluorescent luminaires, ambient lighting, industrial lighting, exterior lighting and emergency lighting.

As minimising energy consumption is a vital consideration for anyone involved in specifying lighting, many of the products are supplied as standard with high frequency control gear and either high wattage compact fluorescent lamps or, for linear products, T5 slimline or T8 fluorescent lamps.

Meanwhile, contractors will particularly appreciate the design features that help to reduce installation time, such as pre-wired mains leads, fast-fit attachments and an extensive choice of cable entry points.

Details of all the luminaires can be found in a new Core Collection catalogue, which Cooper is planning to update twice a year as new products are added.

The 68-page catalogue is available via the Literature Request button at www.cooper-ls.com or by calling the Cooper Lighting literature hotline on 01302 303200.
